BasaltechSA
BASALT MESH & FIBER SOLUTIONS

PRODUCT BROCHURE 2026

◆ ROCK SOLID REINFORCING

The Future of Reinforcement

Pioneering Basalt Fiber Reinforced Polymer (BFRP) Composites — the sustainable, high-performance alternative to steel and glass fiber for the modern construction industry.

3×	4.5×	74%	700°
STRONGER THAN STEEL	LIGHTER THAN STEEL	SMALLER CARBON FOOTPRINT	MAX OPERATING TEMP (°C)

BFRP MESH

BasaltechSA Reinforcing Mesh

Designed to strengthen roadways, highways, and structures by reducing reflective cracking. A superior, lightweight alternative to traditional steel reinforcement.

KEY FEATURES & BENEFITS

Superior Tensile Strength
Higher than E-glass and steel, ensuring robust reinforcement across all applications.

Alkali & Corrosion Resistance
Prevents rust in high-alkali environments. Unlike steel, it will never rust or degrade.

Ease of Installation
Over 1000 m² fits on a 1-ton bakkie. No special equipment needed.

High Temperature Tolerance
Withstands paving and operational temperatures without losing strength.

Environmentally Friendly
Natural volcanic basalt rock with 74% less carbon footprint than steel.

LOGISTICS ADVANTAGE

Over 1000 m² of reinforcing mesh can be transported on a standard 1-ton bakkie — dramatically reducing delivery costs compared to steel.

WHY CHOOSE BFRP MESH

- ✓ Will not rust or corrode
- ✓ Easy to transport & install
- ✓ Lower life cycle cost
- ✓ Superior mechanical strength
- ✓ Reduced shrinkage & cracking

BFRP FIBER

BasaltechSA Fiber

An innovative reinforcing material derived from volcanic basalt rock that dramatically improves concrete properties. High tensile strength, total corrosion resistance, and outstanding durability.

APPLICATIONS

- **Road Surfaces**
  Reinforces asphalt and cement concrete roads, runways, and pavements.
- **Industrial Floors**
  Ideal for logistics centres, parking lots, helipads, and screeds.
- **Underground & Civil Structures**
  Enhances durability in metros, underground foundations, and communications.
- **Buildings & Bridges**
  Strengthens structural elements, concrete structures, and dry mix applications.
- **Soil Stabilisation**
  Improves ground stability for slopes, embankments, and foundations.

PERFORMANCE COMPARISON

PROPERTY	BASALT FIBER ◆	STEEL	GLASS	PP
Tensile (MPa)	**1100–1400**	360–420	35–530	170–260
Temp. (°C)	**−260 to 700**	−60 to 540	−60 to 250	−5 to 80
Density (g/cm³)	**2.8–3.0**	7.8	2.6–2.7	0.89–0.92
Elastic Mod. (GPa)	**79–110**	190–200	≤50	≤35
Corrosion	Very High	Low	High	Low

KEY FIBER PROPERTIES

- ✓ 100% Corrosion Proof
- ✓ 75% Lighter than Steel
- ✓ Non-Conductive / Non-Magnetic
- ✓ Eco-Friendly Volcanic Rock
- ✓ Reduces Microcracks by 90%
- ✓ +55% Flexural Strength

WHY BASALTECHSA

Proudly South African
Local knowledge, world-class BFRP standards. Serving Gauteng & Limpopo.

Expert Technical Support
From specification to installation, our team provides end-to-end guidance.
